Rushikesh Marathe

Cybersecurity Professional | SIEM | Endpoint Security | Network Security

rushikeshmarathe46@gmail.com | +91-9284454161 | Pune, India | linkedin.com/in/rushikesh-marathe-320a7023a

SUMMARY

Cybersecurity professional with hands-on experience in Windows, networking, hardware, and endpoint troubleshooting, supported by a strong foundation in network security, log analysis, vulnerability assessment, and TCP/IP networking. Skilled in incident troubleshooting, root-cause analysis, technical support, and secure IT operations. Seeking to contribute to technical support, network troubleshooting, and customer-focused incident resolution.

PROFESSIONAL EXPERIENCE

WNS Global Services, *IT Support Engineer* 09/2024 – Present | Pune, India

- Provide L1/L2 technical support for Windows/Linux systems, hardware, applications, and network-related issues.
- Troubleshoot TCP/IP, DNS, VPN, authentication, connectivity, and endpoint issues using structured troubleshooting and root-cause analysis.
- Analyze system, application, and security logs to identify errors, authentication failures, suspicious activities, and anomalous behavior.
- Manage incidents through ServiceNow, including ticket prioritization, SLA tracking, documentation, escalation, and resolution.
- Perform hardware, network, and storage troubleshooting to maintain system availability and operational reliability.
- Support security patching, IDS/IPS monitoring, vulnerability remediation, and endpoint security activities.
- Escalate complex technical issues to relevant teams and collaborate to drive incidents through resolution.
- Maintain technical documentation, incident reports, and troubleshooting procedures for operational support.

PROJECTS

ESP32-Based IoT Honeypot System for Real-Time Intrusion Detection, *JSPM University* 03/2025 – 04/2026

- Designed and implemented a low-cost IoT honeypot using an ESP32 microcontroller to simulate a fake HTTP web server for detecting unauthorized network intrusion attempts.
- Developed a fake login endpoint to capture attacker-submitted credentials, source IP addresses, and timestamps using HTTP POST request handling.
- Integrated a real-time alert system using the Telegram Bot API to send instant mobile notifications upon detecting suspicious login attempts.
- Achieved 2–4 seconds detection-to-alert latency with successful event capture during testing under standard Wi-Fi conditions.
- Deployed and tested the honeypot in a local network environment using Kali Linux, Nmap, cURL, and controlled brute-force testing..

SKILLS

Cybersecurity & Analysis — Network Security, Authentication, Access Control, Log Analysis, Security Event Analysis, Vulnerability Assessment, IDS/IPS, Incident Response, SIEM/EDR Fundamentals

Technical Support & Troubleshooting — L1/L2 Support, Technical Troubleshooting, Root Cause Analysis, Hardware & Software Troubleshooting, Application Support, Remote Troubleshooting, Incident Management, Incident Escalation

Networking & Infrastructure — TCP/IP, DNS, DHCP, VPN, Routing, Firewalls, Network Troubleshooting, Windows/Linux, Wireshark, Nmap, Storage & Network Hardware

Security Tools & Frameworks — Burp Suite, MITRE ATT&CK, NIST, OWASP Top 10, Windows Security

ITSM & Customer Support — ServiceNow, Ticket Management, SLA Management, Customer Support, Technical Documentation, Incident Reporting, Customer Communication

CERTIFICATES

Certified Ethical Hacker (CEH) — Penetration testing, vulnerability assessment, and threat identification across networks and web applications. | Issued No : 04 March 2025

CompTIA Network+ (N10-008) — Simplilearn training program. Core networking concepts, TCP/IP, network security, and troubleshooting

Learning Threat Intelligence — Cyber Threat Intelligence (CTI) | Cybersecurity

EDUCATION

Master of Science (M.Sc.) in Cyber Security, *JSPM's Pune University* 08/2025 – Present | Pune

Bachelor of Science (B.Sc.) in Computer Science, *Sant Gadge Baba Amravati University* 08/2021 – 04/2024 | Amravati
